

BizPilot — AI Assistant for Small Business

(Hackathon Project)

A web app that empowers entrepreneurs to transform raw ideas into thriving businesses and sustain them through intelligent automation from ideation and multi-faceted go-to-market strategies, to advanced supply-chain optimization, predictive production forecasting, and adaptive growth scaling. AI delivers personalized, step-by-step guidance; premium unlocks enhanced model variations, in-depth analytics, real-time simulations, and autonomous operational workflows.

Pre-Hackathon (At Home)

Elevator Pitch (Partial)

BizPilot revolutionizes entrepreneurship by leveraging AI to rapidly validate, strategize, launch, and scale small businesses. Users input their concept (e.g., "eco-friendly shoe brand in Dhaka") via text, voice, or document upload.

Core Value Propositions (Partial)

- **Ultra-fast ideation-to-execution:** Generate 2–3 comprehensive, simulation-tested startup models in under a minute, with interactive visualizations for cost-revenue trade-offs (setup visualizations without AI generation).
- **Scalable monetization:** Freemium model with premium tiers unlocking advanced simulations (e.g., Monte Carlo risk assessments), API integrations for enterprise tools, custom AI fine-tuning, and collaborative features for team-based entrepreneurship (prepare tier structures without integrations).
- **Community-driven evolution:** User feedback loops to refine AI models, plus a marketplace for sharing anonymized business templates and peer collaborations (build basic feedback forms).

Target Users

- Aspiring solo entrepreneurs and innovators in emerging markets like Dhaka, seeking to bootstrap micro-businesses with limited resources.
- Existing small business owners (e.g., retail shops, artisans) aiming to digitize and optimize operations for growth, such as expanding from local sales to e-commerce.

- Startup incubators, accelerators, and community hubs (e.g., in Bangladesh or similar regions) that support cohorts of entrepreneurs, using BizPilot as a white-label tool for bulk idea validation and progress tracking.
- Freelancers and side-hustlers transitioning to full-scale ventures, needing quick feasibility checks and operational blueprints.
- Educational institutions or NGOs training underserved communities in entrepreneurship, integrating BizPilot for interactive learning modules.

MVP Feature List (Partial Must-Have)

- Multi-modal user onboarding: Sign-up/login via email, OAuth (Google, LinkedIn), or voice/biometric (demo with Web Speech API).
- Advanced idea ingestion: Form for title, description, location, budget, product category; support for voice dictation, image uploads (e.g., sketches or competitor products for analysis), and PDF business plans (without AI analysis).
- Dynamic dashboard: Visualize models with charts (e.g., revenue curves, cost pie charts), model comparison tools, and one-click selection with auto-generated task checklists (use placeholder data).
- Premium teaser and gating: Interactive previews of locked features (e.g., simulated "what-if" analyses), with seamless upgrade prompts integrated into workflows.

User Stories (Partial)

- As an entrepreneur, I want to describe my idea via voice and receive a customized 6-month launch roadmap with interactive simulations, so I can experiment with variables before committing (setup roadmap templates without simulations).
- As an incubator admin, I want to batch-process multiple ideas for a cohort, generating aggregated insights and progress dashboards to track group performance (build basic dashboards).
- As a side-hustler, I want proactive alerts via email/SMS about market opportunities (e.g., trending shoe styles in Dhaka) to stay ahead of competitors (prepare alert setups without AI detection).

Frontend Pages & Flows (Partial)

- Interactive Landing / Pitch: Hero section with AI demo widget (e.g., quick idea input for teaser model).
- Secure Sign-up / Login: With profile setup for personalization (e.g., select language, business stage).
- Idea Creation Hub: Multi-step wizard with voice/image inputs, real-time previews, and AI suggestions during entry (placeholders for suggestions).

- **Idea Exploration Dashboard:** Tabbed views for models, comparisons (side-by-side diffs), and simulations (sliders for variable tweaks) (use mock data).
- **Billing & Account Management:** Tier comparison table, usage analytics, and referral program for credits.

Wireframe Suggestions (Partial)

- **Dashboard:** Modular grid with idea cards (expandable for quick stats), AI chat bubble with notification badges, and a global search for cross-idea queries.
- **Idea Detail:** Split-screen layout — left: model navigator with filters (e.g., by risk level); right: immersive viewer with zoomable charts, embedded simulations, and collaboration invites.
- **Mobile-Responsive:** Foldable menus for small screens, voice-first interactions for on-the-go use.

Security & Privacy (Partial)

- **Encryption:** Implement robust data encryption to ensure the confidentiality and protection of all sensitive information.
- **Rate Limiting & Abuse Prevention:** Token-based limits on AI calls; CAPTCHA on high-value actions; AI monitoring for harmful outputs.
- **Audit Trails:** Log all AI interactions for transparency; user-accessible history with edit rights.

Monetization & Subscription Tiers

- **Free:** Basic 2 models per idea, 3-month forecasts, limited chat (50 messages/month), core features only.
- **Pro (\$9.99/mo):** Unlimited models with variants, 24-month advanced forecasts (ML-enhanced), supplier marketplaces, automated templates (emails, contracts), integrations, and custom alerts.
- **Enterprise (\$49.99/mo):** Team accounts, white-label branding, API access for custom integrations, dedicated AI fine-tuning, SLAs, and analytics exports for investors.

Risks & Mitigations (Partial)

- **Scalability Under Load:** Use serverless architecture; cap demo users; monitor with New Relic-like tools.
- **Technical Dependencies:** Have offline fallbacks for AI (e.g., cached models); test cross-browser compatibility.
